# Our Pillars

How do you wake up and achieve your full potential in the world we live in today? We believe it is through your AWAKENDhealth, AWAKENDself and AWAKENDwealth.

## AWAKEND health

Addresses the major health issues the world faces. How often do you give attention to aspects of your health that aren't serving you? Your excess fat, foggy memory, that injury that never quite recovered, the list goes on.\*

When we begin to tackle these issues, you reclaim this attention and get to refocus it on areas that DO serve you - your present moment, your tribe, your purpose.

## AWAKENDself

Is all about understanding: I Create My Reality. If there was any part of you that was uncomfortable reading this affirmation, our goal is to help you wake up to the simple truth that through your thoughts, words and actions, you are a creator of success.

Our flagship AWAKENDself program AWAKENDmind will teach you how to rewire your brain and create the incredible life you are more than capable of designing and living.

## AWAKENDwealth

Comes down to believing your life can be abundant in all areas.

We WANT your life to be epically abundant and are here to provide all the pieces to make this possible. If our breakthrough products and revolutionary programs resonate with you, we invite you to share the Awakend Movement with others.

# Month 2 Meltdown!

Study participants lost more fat in their second month on Zenith compared to their first month! It takes time for leptin levels to start normalizing.

## What is Leptin?

Leptin is a signaling hormone that helps regulate appetite by telling your brain to either “keep eating and store fat” or “stop eating and burn fat”. If you have too much fat, you have too much leptin. This results in leptin resistance - the main driver of fat gain in humans.

Ever wonder why you can cut calories and exercise like crazy, only to eventually gain all the weight back? Yup, you can blame it on leptin resistance. Leptin resistance sabotages all dieting efforts, causing you to feel hungry and eat more even though your body has enough fat stores. This ignites a vicious cycle.

## What is Adiponectin?

Adiponectin is a hormone that is mainly known for regulating glucose levels and for its anti-inflammatory effects. Lower-than-normal adiponectin levels are associated with several issues including obesity.
